-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 and 9-13 are rejected under 35 U.S.C. 102(b) as being anticipated by Ohlson (US 3,425,314). Ohlson discloses a locknut comprising a first member (5) having a non-continuous deflection wall (13) and a coaxial second member (3) having internal threads and including a deflecting element (11) with an engaged relationship with the deflection wall until a predetermined torque. The engaged relationship is characterized by a friction force or interference fit between deflecting element and the wall wherein, due to the ramped surface of deflecting element, the friction force increases until the predetermined torque as the deflecting element slides along the wall. Inherently, the walls resistance to deflection is dependent upon the size and shape of the wall. The deflection wall and deflecting element has in increasing thickness in opposite directions.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claim 8 is rejected under 35 U.S.C. 103(a) as being unpatentable over Ohlson as applied to claim 1 above, and further in view of Rak (US 6,070,774). Ohlson does don't disclose the first and second members retained together by a snap-fit. Rak discloses a snap-fit (at 107) between coaxial members. At the time the invention was made, it would have been obvious for one of ordinary skill in the art to provide the device of Ohlson with a snap-fit as disclosed in Rak in order to provide for an easy and secure a assembly of the two members so that they would not become separated.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
